

top level / start symbol

$E \rightarrow T + E$
 $E \rightarrow T$
 $T \rightarrow F * T$
 $T \rightarrow F$
 $F \rightarrow \text{NUM} | \text{ID} | (E)$

LHS
 RHS
 rule
 $E \rightarrow T + E$

A rule has

A LHS which is a non-terminal

A RHS (right hand side) which is a sequence of terminals and non-terminals
 tokens

Terminals cannot appear on the LHS of a rule

Recursive descent parsing

- One parse function for each non-terminal
- when `parse-X()` is called :
 - Either a part of the input that corresponds to `X` is consumed, or
 no more no less
 - syntax_error is raised and we exit the program

Non-terminal `X` is consumed by calling `parse-X()`

Terminal `tt` is consumed by calling `expect(tt)` ;

In general

```
expect (ttype) : t = getToken();  
if (t.token-type != ttype)  
    syntax-error();  
else  
    return t;
```

parse-input()

 \sim

1 + 2 * 3

parse - $E()$; $1 + 2 \times 3$ ↑

expect (toF);

3

parse- $E()$

1 // $E \rightarrow T + E$

$$\parallel E \rightarrow T$$

parse-T();

// consume T

```
t = peek(1);
```

if (t.token_type == PLUS)

5

```
expect (PLVS); // consume +
```

parse- $\epsilon()$; // consume ϵ

5

```
if ((t.token_type == EOF) |
    (t.token_type == RPAREN),
```

```
return;
```

else

`syntax_error()`;

3

$$\begin{bmatrix} 1 \\ F \\ T \\ E \end{bmatrix}$$

↑

$$\begin{pmatrix} 1 \\ F \\ T \\ E \end{pmatrix}$$

$$\begin{matrix} \text{---} \\ F \\ \text{---} \\ T \\ \text{---} \\ E \end{matrix}$$

parse-f()

$$\S \parallel F \rightarrow N \vee M$$
$$\neg \neg \vdash \neg \neg$$

```

{
    // F → NUM
    // F → ID
    // F → ( E )

    t = peek(1);
    if (t.token-type == NUM)
        expect(NUM); // NUM
    else if (t.token-type == ID)
        expect(ID); // ID
    else if (t.token-type == LPAREN)
    {
        expect(LPAREN); // (
        parse-E(); // E
        expect(RPAREN); // )
    } else
        syntax-error();
}

```

```

parse-T()
{
    // T → F * T
    // T → F

```

```

    parse-F();

```

```

    t = peek(1);

```

```

    if (t.token-type == MULT)
    {

```

```

        expect(MULT);

```

```

        parse-T();
    } else

```

```

        if (
            (t.token-type == EOF) |
            (t.token-type == RPAREN) |
            (t.token-type == PLUS)
        )

```

```

            return;

```

```

        else

```

```

            syntax-error();

```

```

    }

```
